FBI and CISA Warn Hackers Are Tampering With Refrigeration Controls

A joint advisory says attackers are changing temperatures in cold-chain systems after strikes on European supermarkets and French blood stores.

The FBI and CISA warned on Thursday that hackers are targeting industrial refrigeration and cold-chain monitoring systems worldwide. The joint advisory says attackers exploit unpatched or internet-facing controllers to change temperatures and force heating or defrost cycles. Hackers hit an estimated 250 to 350 French supermarkets in October and more than 115 stores in six European countries this month, raising some temperatures to 50 degrees Celsius. France's blood service confirmed on November 3 that an attack on a supplier altered settings at three blood storage sites. CISA's Chris Butera said every organization relying on such systems should assume it could be a target. BLEEPINGCOMPUTER [1]

ON THIS DATE

The Battle of Jemappes, November 6, 1792. Horace Vernet, Public domain, Wikimedia Commons

On November 6, 1792, the French Armee du Nord under Charles Dumouriez, some 40,000 men with 100 guns, defeated an Austrian army of about 13,000 under Duke Albert of Saxe-Teschen at Jemappes, near Mons in the Austrian Netherlands. Mons surrendered the next day and Brussels fell on November 14. Dumouriez lost the Netherlands again at Neerwinden in March 1793.

2 ARTIFICIAL INTELLIGENCE

2.1 OpenAI Opens a Cyber Model to Top Researchers and Pledges $1 Billion for Defenders

OpenAI announced a cybersecurity model, titled GPT-6 Cyber in its feed and described by TechCrunch as ChatGPT Cyber, available to the highest tier of its Daybreak program, Daybreak Red, which serves offensive security researchers. A day earlier the company said the model had scanned the Linux kernel and prepared patches for 948 potential issues and found 81 new vulnerabilities in Firefox; TechCrunch reports the Linux effort cost $1.2 million. OpenAI also announced a $1 billion initiative to support program members who work on critical infrastructure such as electrical grids and water systems, and said thousands of security professionals are enrolled. OpenAI researcher Eric Wallace said the company is allocating a significant amount of frontier compute to finding and patching flaws in open-source code without charge. Max Justicz, chief technology officer of Charge Robotics, told TechCrunch he spent about $5,000 using an earlier OpenAI model through Daybreak Blue to find a severe Ubuntu server flaw, which the Debian Project patched, and said that tier now appears weakened. 2.2 Google Releases Gemini Omni 1.2 Flash With 15-Second Video Clips

Google is rolling out Gemini Omni 1.2 Flash, which creates and edits video clips of 3 to 15 seconds, up from 10 seconds in the previous version. The price falls 30 percent to $0.07 per second of 720p video, and the model is generally available through the Gemini API, Google Cloud and Gemini for business. Users can revise a clip over several conversational turns, supply reference images, short motion clips and audio cues, and upscale drafts to 1080p or 4K. Outputs carry an invisible SynthID watermark, and the model reaches Flow, Google Vids, Google Ads and the Gemini app for AI Ultra subscribers. GOOGLE [3]

2.3 Anthropic Adds a Read-Only Personal Finance Tool to Claude

Anthropic announced Thursday that Claude users can connect bank and credit card accounts through Plaid and ask questions about their spending. The company says access is read-only, limited to account names and types, the last four digits of account numbers, balances, credit limits and up to two years of transactions, and that conversations in the hub are not used for training. Claude can total spending by category, flag duplicate charges and rising bills, and calculate interest paid; Anthropic says the feature carries no ads or sponsored offers. The beta reaches Pro, Max and Ultra subscribers in the United States this week, months after OpenAI introduced similar tools in May. TECHCRUNCH [4]

2.4 Brockman Says OpenAI Could Be Ready to Go Public in 2027

OpenAI president Greg Brockman said at a Wall Street Journal conference on Wednesday that the company could be ready for an initial public offering in 2027. He called the first two quarters of 2026 rough and said OpenAI had not been part of the conversation on agentic coding, where Anthropic's Claude Code gained share. Brockman said annualized revenue grew 70 percent quarter over quarter in the third quarter as enterprise business doubled, and that enterprise now accounts for most of OpenAI's revenue, up from about 30 percent. TECHCRUNCH [5]

2.5 Dropbox Buys Tigris Data for $350 Million

Dropbox is acquiring cloud storage company Tigris Data for $350 million, which TechCrunch describes as its largest purchase to date, with closing expected in the fourth quarter. The deal supports DBX Agent Cloud, a storage platform that will first offer object storage compatible with tools built for Amazon S3. Dropbox told TechCrunch it has no plans to cut staff because of the deal; it reduced its workforce by 9 percent last month. Tigris was founded by former Uber engineers and raised a $25 million Series A last year. TECHCRUNCH [6]

3 THE DESERT AND THE STRANGE

3.1 Senate Permitting Bill Would Make Tribal Consultation Optional

A permitting bill introduced by Western senators including Martin Heinrich of New Mexico and Mike Lee of Utah would rewrite Section 106 of the National Historic Preservation Act, making tribal consultation optional and narrowing what triggers it. Cultural sites not formally identified before review began would not need to be considered, review deadlines would be shortened, and a project certainty provision would make issued permits much harder to change or revoke. High Country News places the measure against the Roca Honda uranium mine near Mount Taylor, New Mexico, a place of significance to at least 30 Native nations, which the Forest Service said in September it would review under NEPA. Acoma Pueblo Gov. Charles Riley said the bill would take away most of the tribes' role, and National Congress of American Indians president Mark Macarro said it should be killed without major changes. A spokesperson for Heinrich said the senator does not believe the bill as written harms tribal consultation. HIGH COUNTRY NEWS [8]

3.2 Photographer Records the West's Vanishing Desert Springs

Bremner Benedict has spent nine years photographing desert springs across the West for a forthcoming book, 'Hidden Waters.' A spring ecologist told her that more than 80 percent of springs in northeast Arizona have been ecologically impaired since 1880 and that springs support more than 15 percent of the nation's endangered species. Her subjects include Dyke Hot Springs in Nevada's Black Rock Desert, used by Indigenous people for 10,000 years, Corn Creek Springs inside the Nevada Test and Training Range, and Borehole Spring in the California Mojave, formed when a borehole punctured a pressurized aquifer. Her captions note agricultural overpumping at Bottomless Lakes, New Mexico, and drought threatening the Borehole wetland. HIGH COUNTRY NEWS [7]

4 FILM

4.1 'Godzilla Minus Zero' Takes About $6 Million in Previews

Takashi Yamazaki's 'Godzilla Minus Zero' took in about $6 million in previews, counting Godzilla Day fan screenings earlier in the week and Thursday night shows, according to World of Reel. The film had been tracking toward a domestic opening above $30 million, and the site now puts a $40 million opening within reach. 'Godzilla Minus One' made $2.1 million from its Wednesday and Thursday shows and opened to $11.4 million. World of Reel, citing Deadline, reports that distributor GKids spent

about $10 million on marketing; no budget has been reported. The figures are previews and projections, not weekend grosses. WORLD OF REEL [9]

4.2 New York Times Nears $330 Million Purchase of Letterboxd

Letterboxd is in exclusive talks to sell itself to The New York Times at a valuation of $330 million, World of Reel reports, citing the Times. Nothing has been signed. The price is more than 20 times the roughly $15 million the site is projected to earn this year, and Sony and A24 were reported among bidders when the sale first leaked in September. Letterboxd has close to 31 million members, up 43 percent in a year and from 1.8 million in 2020. WORLD OF REEL [10]

4.3 Jonathan Garson to Succeed Jim Morris as Pixar President

Pixar general manager Jonathan Garson will succeed Jim Morris as president, and producer Jonas Rivera becomes executive vice president of creative, effective January 4, 2027. Pete Docter remains chief creative officer, and Morris, president since 2014, becomes president emeritus with no retirement date set while staying executive producer of 'Incredibles 3.' Garson will run production and operations and reports to Alan Bergman, chairman of Disney Entertainment Studios. Cartoon Brew ties the changes to job cuts at Pixar in 2024 and during Disney's 2026 cost reductions. CARTOON BREW [11]

4.4 Lionsgate Orders Animated 'John Wick' Prequel With Keanu Reeves

Lionsgate has approved an untitled animated 'John Wick' prequel with Keanu Reeves returning to voice the character. The film depicts the Impossible Task, the night Wick killed his rivals to win release from the High Table. Shannon Tindle, director of 'Ultraman: Rising,' will direct from a script by Ryan and Kaz Firpo, who replaced Vanessa Taylor; no release date is set. WORLD OF REEL [12]

5 TECHNOLOGY

5.1 Amazon Drops Grubhub and Names Uber Eats Its Prime Delivery Partner

Amazon has made Uber Eats the official restaurant delivery partner for U.S. Prime members, ending the Grubhub arrangement it began in 2022. Prime members can order from Uber Eats through Amazon.com and the Amazon Shopping app without an Uber account and will pay no delivery fee on orders over $25, the companies said. Amazon said the Grubhub agreement ends Thursday, though members who already activated Grubhub+ keep it through December 31, 2027, and a Grubhub spokesperson confirmed the end of the deal. The partnership adds to existing ties between the companies in cloud computing, Zoox robotaxis and Alexa+. TECHCRUNCH [13]

5.2 Tesla Asks NHTSA to Keep All Its Sworn Cybercab Answers Secret

Tesla answered a National Highway Traffic Safety Administration special order on the October 30 deadline and asked that the entire response be treated as confidential business information, Electrek reports. The order posed 21 questions on how the Cybercab, which has no steering wheel, pedals or mirrors, meets federal motor vehicle safety standards without an exemption, with civil penalties of up to $139 million for incomplete answers. The only substantive public document is Tesla's first responder plan dated September 3, the day Tesla began charging for Cybercab rides in Austin. NHTSA has not commented on the request and has not found the vehicle noncompliant. ELECTREK [14]

5.3 TikTok Launches a Separate Shop App in Southeast Asia

TikTok has released a standalone TikTok Shop app for iOS and Android in Singapore, Malaysia, Thailand and the Philippines. Its description lists product recommendations, shopping through live streams and short videos, app-only deals, in-app checkout and order tracking. TikTok did not respond to TechCrunch's request for comment, and it is not known whether the app will reach the United States. TECHCRUNCH [15]

5.4 Instagram Brings Its Edits Video App to the Mac

Instagram said Thursday that Edits, its short-video editor, is coming to Mac desktops with a multi-track timeline, keyframed transitions, licensed music and automatic captions. Creators can publish directly to Instagram and export watermark-free 4K video in horizontal or vertical formats. The move puts Edits against ByteDance's CapCut, available on desktop since 2021; Instagram says the mobile app serves more than 50 million creators. TECHCRUNCH [16]

LITERATURE

THE ESSAY

How the Phone Book Taught America to Ask for Answers

JSTOR DAILY

The essay argues that the printed telephone directory taught Americans to treat the telephone network as something to be queried, and so helped form the modern idea of information. Working from a run of Georgetown, Texas, directories from 1913 to 1959, it traces how subscribers wrote missing numbers on their covers, then tied up operators asking for the rest, until the companies created an Information operator meant only to supply unlisted numbers. Callers soon brought general questions instead, and engineers' efforts to discourage the service ran through dialing and, in 1968, a renaming to Directory Assistance. The author concludes that ordinary subscribers had improvised by hand the notion that a network's value lies in what can be asked of it.

BOOKS

Black Hawk

J. B. PATTERSON, 214 PP.

Imperium Press's Great Men Series edition of the life of the Sauk war leader who fought beside the British and led his band in the Black Hawk War of 1832. *Imperium Press, paperback $20; hardcover also offered. No ebook listed.*

Spacewalkers Install the Last of Eight New Station Solar Arrays. The 63-foot array unfurled in about 10 minutes during a spacewalk of 6 hours 59 minutes. SPACE.COM [17]

Tooth Proteins Tie China's Homo Erectus to a Denisovan Trait. Researchers led by Qiaomei Fu of the Chinese Academy of Sciences extracted enamel proteins from six Homo erectus teeth about 400,000 years old from Zhoukoudian, Hexian and Sunjiadong, according to a report in Nature summarized by ScienceDaily. All six share an amino acid variant seen in no other hominin, grouping the East Asian specimens together and confirming the Hexian fossils as Homo erectus. SCIENCEDAILY · NATURE [18]

CURIOSITY

The Ogham on the Chapel Wall

Barryscourt Castle, County Cork. The Speckled Bird, CC BY-SA 4.0, Wikimedia Commons

Barryscourt Castle, a tower house outside Carrigtwohill near Cork, was built between 1392 and 1420 under John Ciotach Barry, seventh Lord Barry. Conservators working in its small chapel found traces of red, yellow, orange and black paint, incised figures of people, animals and boats, and a section of Ogham script, read as domestic graffiti rather than a formal inscription. Cannonball damage from the Desmond Rebellions and the Confederate Wars still marks the masonry, and a fireplace inscription records its 1588 rebuilding by David Barry and Eleanor Roche. Closed in 2016 for damp, the castle reopened in April 2025 after more than 17 kilometres of stone face were repointed by hand in lime mortar.

ATLAS OBSCURA [33]

THE NATION AND THE WORLD

09 THE NATION

From the White House

- President Trump signed a proclamation on November 5 establishing the Oval Office National Monument under the Antiquities Act, covering the Oval Office, the Outer Oval Office and the Cabinet Room.
- The proclamation directs the Secretary of the Interior, through the National Park Service, to prepare a management plan with the White House Office of Administration and to require documentation and a review of alternatives before any substantial alteration or demolition.
- It states that nothing in it limits the President's authority to redecorate, choose furnishings or make ordinary security changes.
- The White House also issued a statement on First Lady Melania Trump's meeting with Russian and Ukrainian representatives of the Oleshky ceasefire, which it says allowed the evacuation of nearly 800 people under agreements signed October 23.
- Kremlin envoy Kirill Dmitriev and Ukrainian lawmaker David Arakhamia spoke at the event, and Arakhamia called the ceasefire the largest de-escalation since 2022, according to Fox News. THE WHITE HOUSE · FOX NEWS [20, 21, 22]

10 THE WORLD

Iran Declares Hormuz Closed to Uncoordinated Ships as Tanker Strikes Mount. Brent crude rose 2.2 percent to $96.70 on Thursday after a nearly 9 percent fall the day before. CBS NEWS [23]
